

# User Experience

Process & Practice

**Factors that  
influence  
user  
experience**

# Overview

- A successful design helps the user achieve their goal.
- The job of the designer is to design a system that moves the user to the appropriate information at the appropriate time.

User experience is  
something you design.

# The Process

# Interrogation

Research  
Interviews  
Strategy

# Experience Design

Interaction Design

# Information Design

Content  
Information Architecture  
Prototyping

# Interrogation

The goal is to clarify  
our thinking so we can  
make informed design  
decisions.

# What do we need to know?

- What is the content?
- What is the competitive landscape?
- Who is the audience?
- What is the goal?

Do your research first.

# Become an Expert

- Get as invested as you can in the content.
- Audit any existing copy.
- Check out related communities on social media.
- Read as much as you can.

Understand  
the Audience

# Basic Assumptions

- The user is an actual person.
- They are looking for something specific.
- They don't know anything about the content.
- They have more important things to do.

A designer's most  
important skill is asking  
good questions.

# User Interviews

- What are their motivations?
- What is their background?
- What do they care about?

Find where the  
user's needs and the  
content overlap.

# Make Recommendations

- Document findings
- Present a plan
- Build consensus

# Avoid Pseudo Science

## Jill Anderson

"I'm looking for a site that will simplify the planning of my business trips."

AGE 29

OCCUPATION Regional Director

STATUS Single

LOCATION Portsmouth, NH

TIER Frequent Traveler

ARCHETYPE The Planner

Organized

Practical

Protective

Hardworking

### Bio

Jill is a Regional Director who travels 4-8 times each month for work. She has a specific region in which she travels, and she often visits the same cities and stays in the same hotel. She is frustrated by the fact that no matter how frequently she takes similar trips, she spends hours of her day booking travel. She expects her travel solutions to be as organized as she is.

### Personality

### Brands

### Goals

- To spend less time booking travel
- To maximize her loyalty points and rewards
- To narrow her options when it comes to shop

### Frustrations

- Too much time spent booking - she's busy!
- Too many websites visited per trip
- Not terribly tech savvy - doesn't like the process

### Motivations

### Technology

**Make a concrete deliverable  
that you can refer back to.**

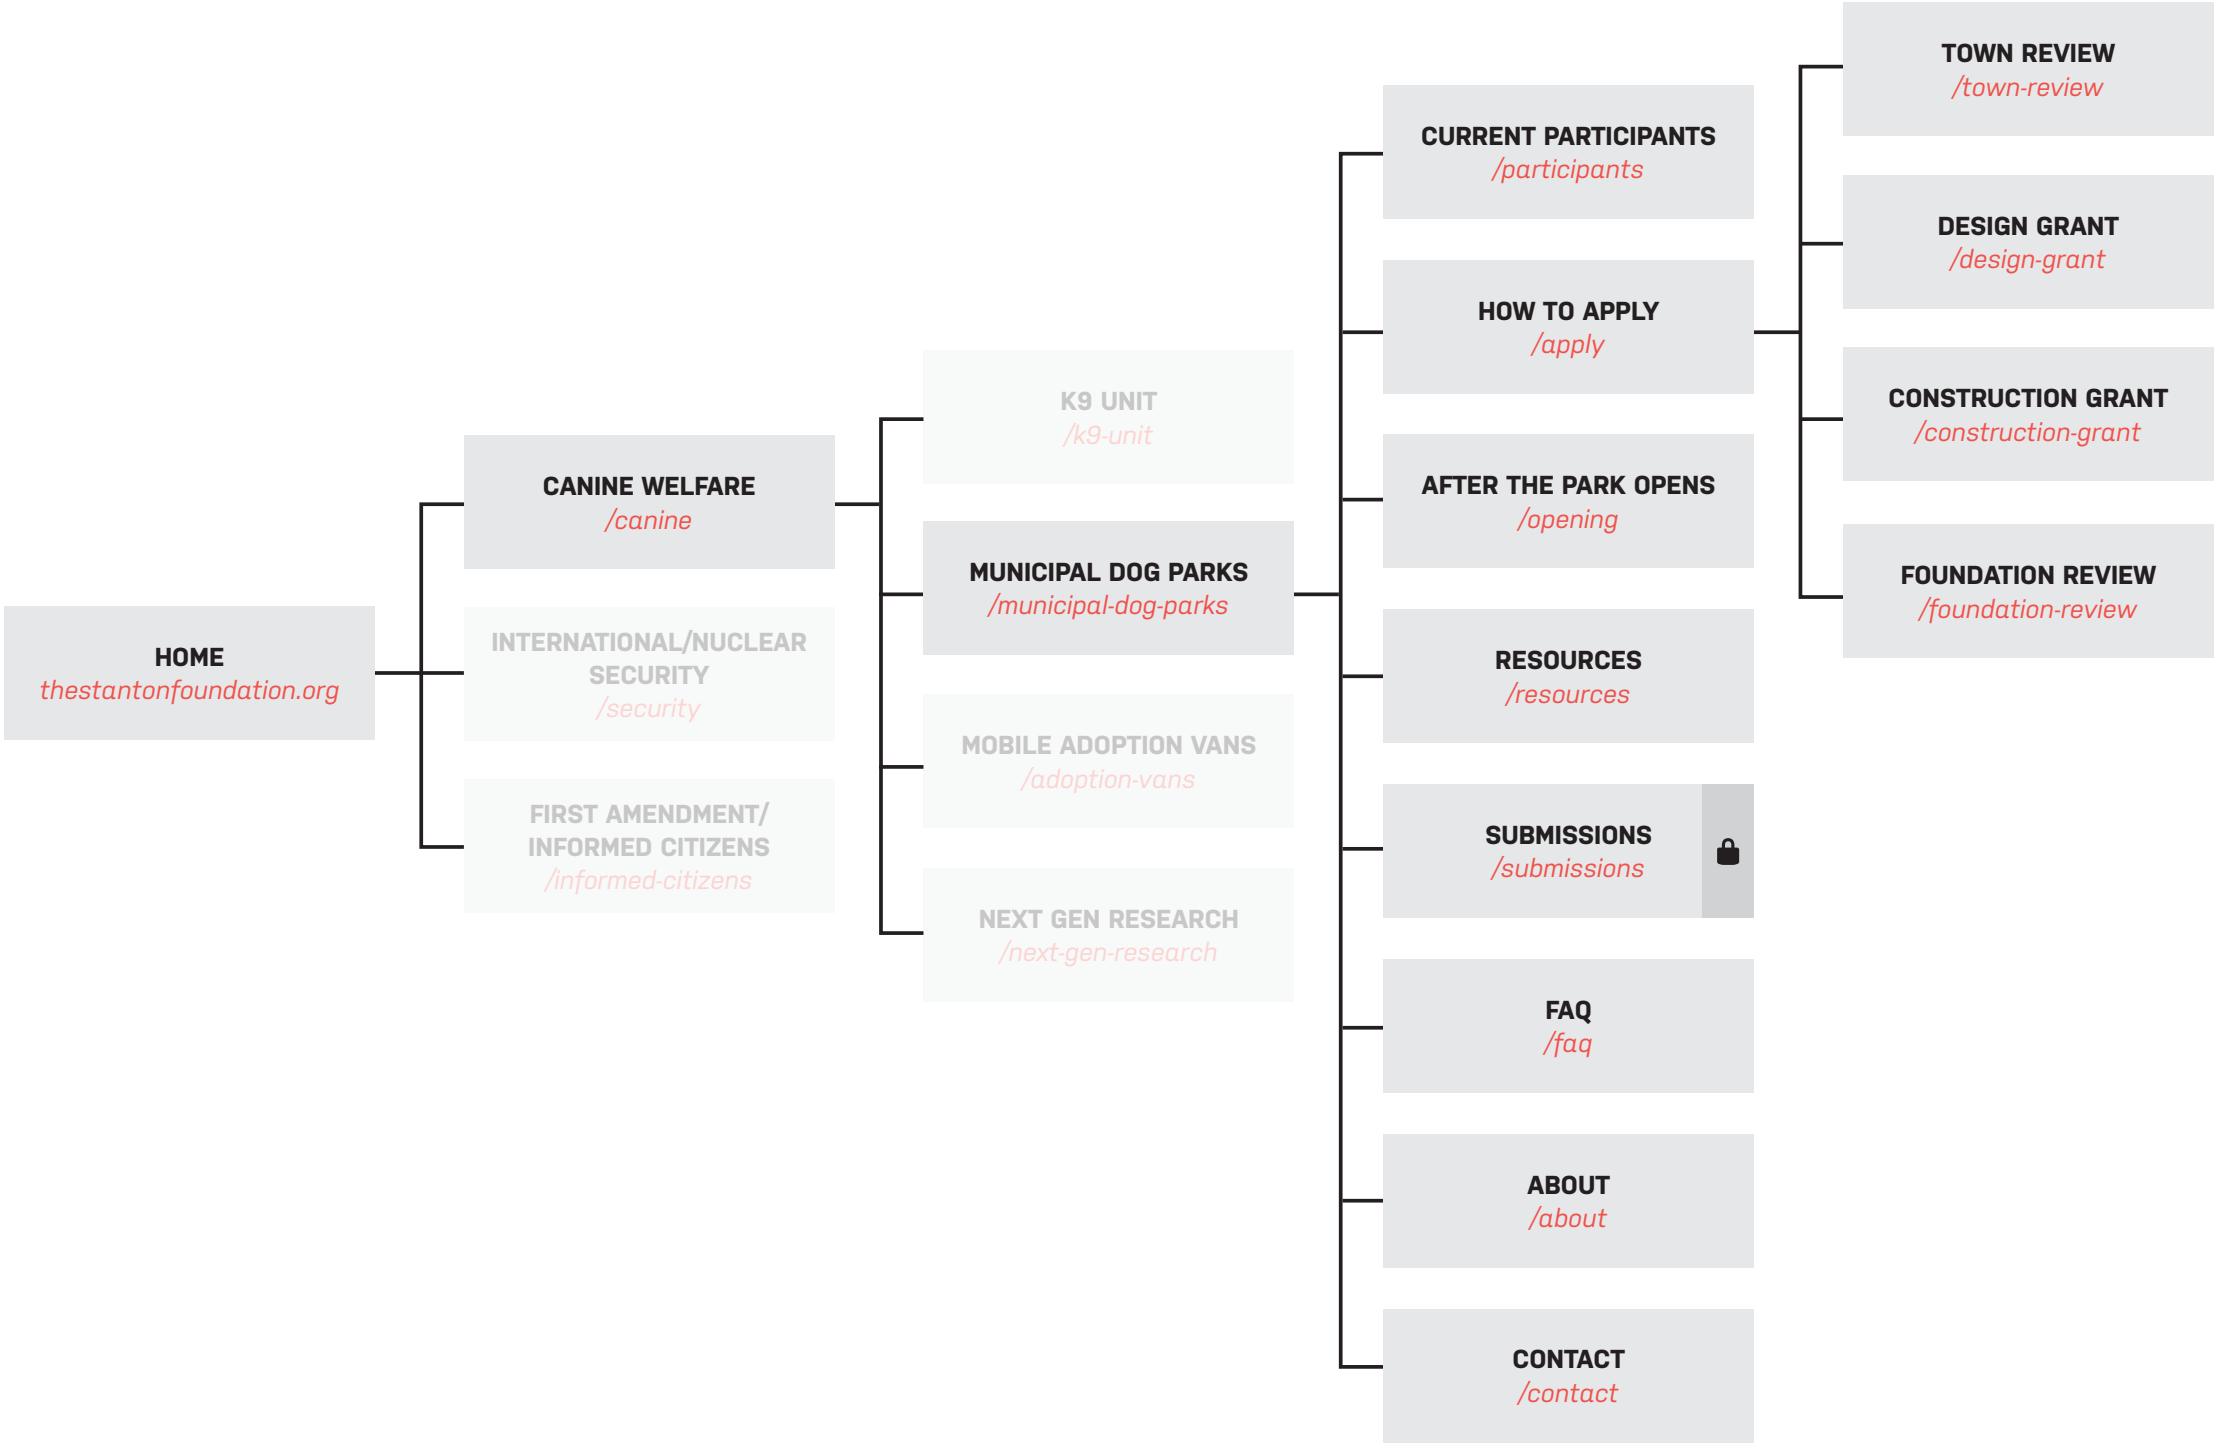

**This will remind you of the  
goals and be a guiding light for  
later decisions.**

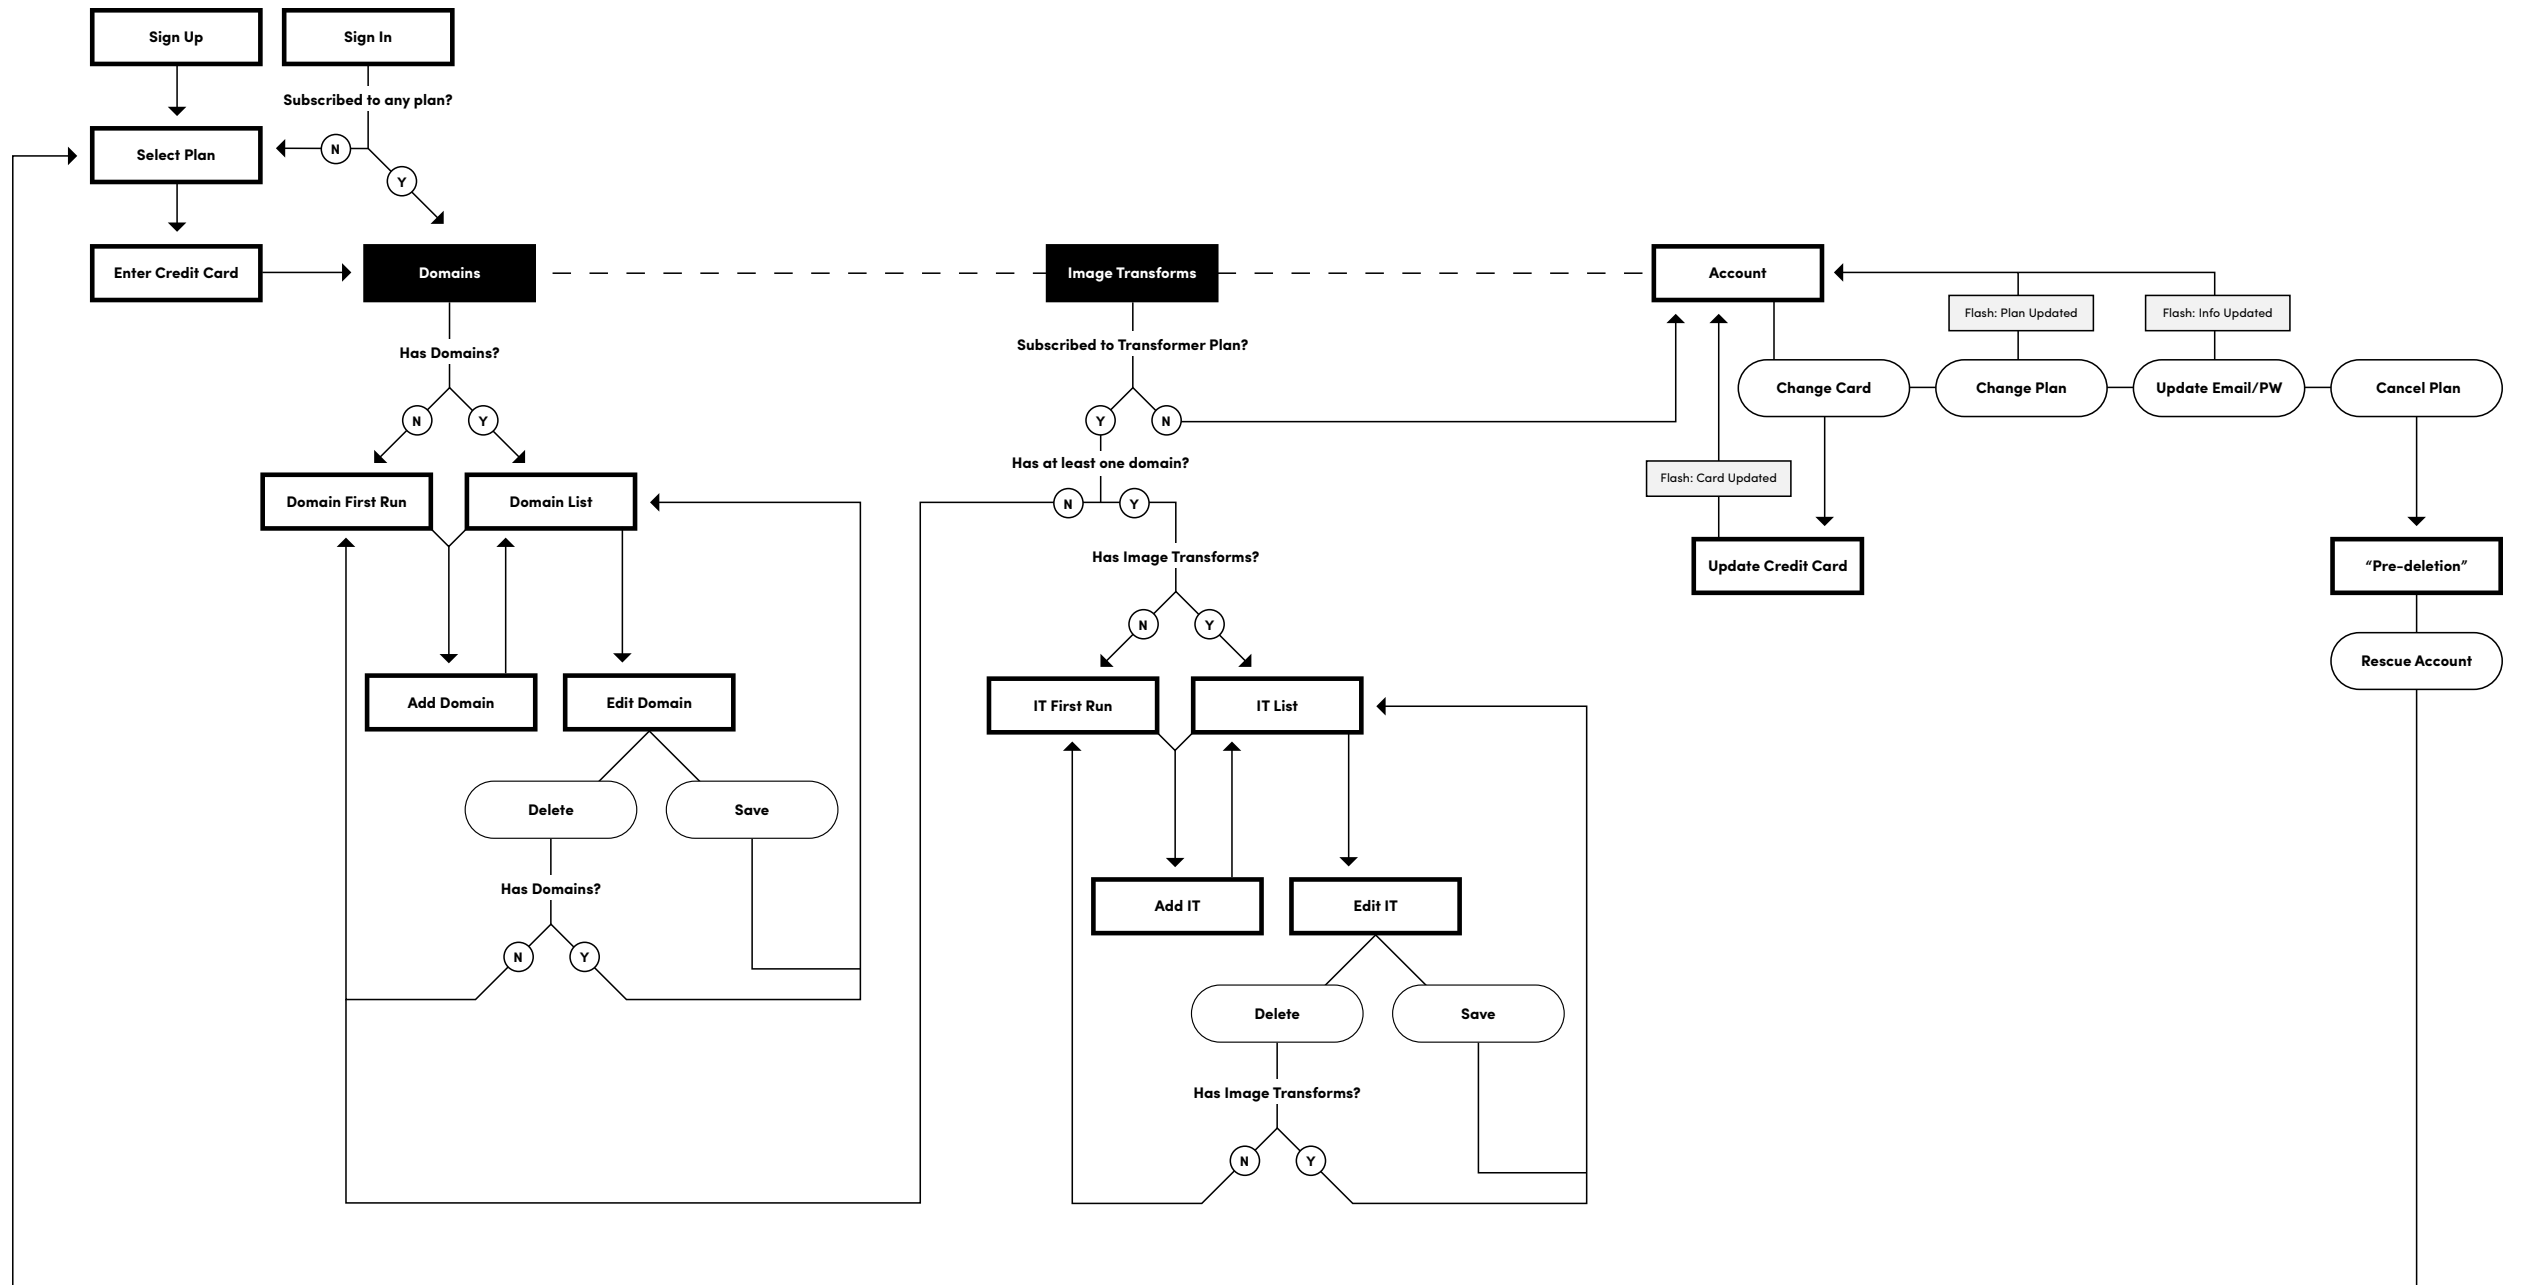

# Information Design

Anyone can make a  
thing. Designers make  
the *right* thing.

# Information Architecture

- Build a mental model of your content.
- Your site should be intuitive and organized in a way that anticipates the user's needs.
- Get users to content as quickly as possible.
- Navigation is a powerful storytelling tool.

Design is how it works.

# Content Strategy

- Identify what already exists.
- Connect goals to information.
- Use content to it's maximum effect.
- Propose new content to support your goals.

# Prototyping

- Start building a “wireframe” in HTML / CSS with real content as soon as possible.
- Iterate until you are confident in the structure of your project.

# Experience Design

# Reconnect to the Goals

- Tie design decisions like color palette, art direction, and typography back to your strategy.
- Visual design can be emotional. Don't let that derail your process.
- Involve stakeholders to build consensus.

# Create a World

- Build a consistent visual language that the user can understand.
- Create hierarchy to move the user through content efficiently.
- Use design elements to draw attention to the most important pieces of content.

# Add Impact

- Make the most out of the assets you create.
- Drive home your point with clear calls to action.

The details are key to a  
good user experience.

Simple > Complex

Be respectful of the user.
